

Medical unit for auto-inflammatory diseases

A transversal structure around the patient.

Nominated as a reference center and expert lab for molecular diagnosis

Medical information:

Web sites, International databases, Conférences, Information and Teaching, Expert reviews

Education:

Prévention
Publications
Registries

Patients:

Associations
Consultations
Networks

Clinics: specialized genetics,

Collaboration with rheumatologists, paediatricians, internal medicine ...

Interpretation:

Clinical and biological data

Laboratory:

Diagnosis
Research

Statistics – Epidemiology

Surveys, incidence and prevalence studies, etiological factors research (genetic and environmental) and prognostic

Biology: molecular genomics, proteomics, setting and transfer of new diagnosis and prognostic tools, search for therapeutic targets, organization of international quality control
